# Dormant Sprays

- 2014 was a good year to see benefits
  - Inoculum potential from 2013
  - Favorable weather
- Effects have been marginal

# UGA Pecan Scab Fungicide Sensitivity Screening Program

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

Fungicide class	FRAC group	Common name	Trade name(s)	Risk
MBCs (benzimidazoles)	1	thiophanate-methyl	Topsin M	H
DMIs (sterol inhibitors, triazoles)	3	propiconazole fenbuconazole metconazole difenoconazole tebuconazole	Orbit, Propimax, Bumper, Quilt*, Quilt Xcel* Enable Quash Quadris Top* Folicur, Tebuazole, Monsoon, Toledo, Orius, Absolute*, Topsin XTR**, Custodia*, etc.	M
Qols (strobilurins)	11	azoxystrobin pyraclostrobin kresoxim-methyl trifloxystrobin	Abound, Quadris Top*, Quilt*, Quilt Xcel*, Custodia* Headline Sovran Absolute*	H
Organotins	30	fentin hydroxide	Super Tin, Agri Tin	L – M
Phosphonates (phosphites)	33	phosphorous acid and salts	Phostrol, ProPhyt, FungiPhite, Reliant, Viathon, Fosphate, Kphite, Phiticide, Rampart, Topaz	L
Guanidines	U12	dodine	Elast (Syllit)	L - M

\* Formulated mixture of a DMI and a QoI

\*\* Formulated mixture of a DMI and an MBC

# How Does Resistance Develop?

Sudden, dramatic appearance of resistance (1-3 years)

- MBCs (Benlate, Topsin M)
- Qols (Abound, Sovran, Headline, etc.)

Gradual shift toward resistance (10 years or more)

- Dodine (Elast)
- Organotins (Super Tin, Agri Tin)
- DMIs (Propimax, Enable, tebuconazole products, Quash, Absolute\*, Quadris Top\*, Quilt\*, etc. )

# Pecan Scab Fungicide Sensitivity Summary - 2014

- 38 counties
- 179 samples
  - Results from 156 sample
  - More success with samples earlier in the year
  - No samples after July 31, 2015

**UGA**  
extension

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

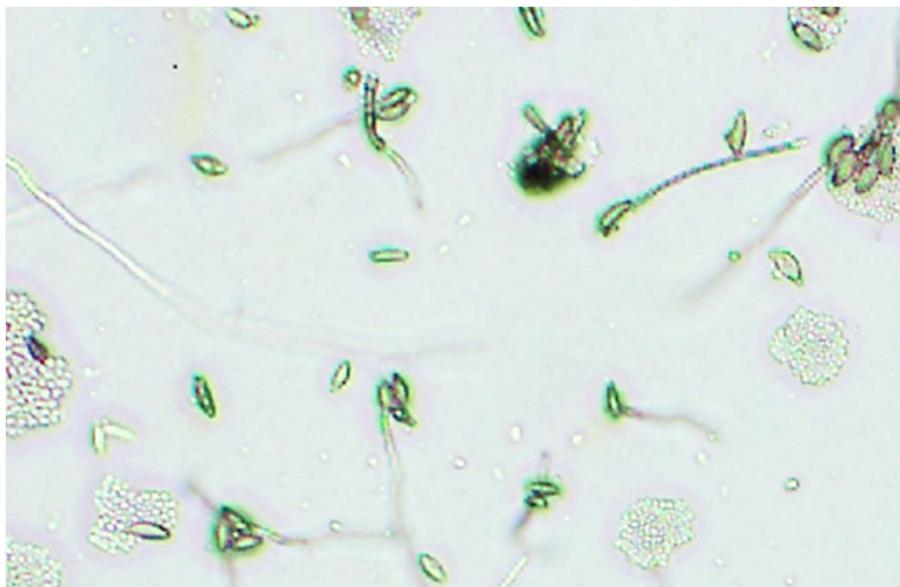

# New Rapid Assay

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# Conidia germination (2 days)

TPTH

Thiphonate-methyl  
dodine

Relative germination (RGm):

$$RGm = \frac{\% \text{ germination on fungicide medium}}{\% \text{ germination on control medium}}$$

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# Micro-colony Growth (3 days)

Triazoles (DMIs)

Relative growth (RGr):

$$RGr = \frac{\text{mean colony diameter on fungicide medium}}{\text{mean colony diameter on control medium}}$$

# Sample of 2014 Sensitivity Report

## 2014 UGA PECAN SCAB FUNGICIDE SENSITIVITY MONITORING PROGRAM

Name:  
Email:  
Farm:  
County:

Sample #: 14056  
Sampling date: 6/6/14  
Cultivar: Schley

Mean % relative germination or growth (RG) on medium containing discriminatory fungicide concentrations ( $\mu\text{g/ml}$ ) compared to non-amended controls  
Bulk spore method, 3 groups of 15 lesions from each sample  
Spore germination (48h): TPTH, azoxystrobin, thiophanate-methyl (TPM), dodine  
Fungal growth (72h): propiconazole, tebuconazole

Fungicide Concentration	TPTH 30.0	Azoxystrobin 10.0	TPM 1.0	Dodine 3.0	Propiconazole 1.0	Tebuconazole 1.0
% RG	54	61	72	7	39	39

## in vitro results → efficacy in field

40-69      medium  
70 or more      high

### Summary:

Based on the assay results, there is a high level of insensitivity to thiophanate-methyl (TPM) and a medium level of insensitivity to TPTH at this sampling location. There is a low level of insensitivity to dodine, propiconazole and tebuconazole. There may be a medium level of insensitivity to azoxystrobin; however, further tests will be required to verify insensitivity to azoxystrobin.

For additional interpretation of results or for recommendations on fungicide selection, please contact

# Number of samples with high insensitivity to one or more fungicide classes

	# Samples	%
High insensitivity to <b>4</b> fungicide classes	1	~ 1
High insensitivity to <b>3</b> fungicide classes	1	~ 1
High insensitivity to <b>2</b> fungicide classes	17	11
High insensitivity to <b>1</b> fungicide class	67	43
High insensitivity to <b>0</b> fungicide classes	70	45
Total	156	100

**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# dodine

**UGA**  
extension

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

**Insensitivity class**

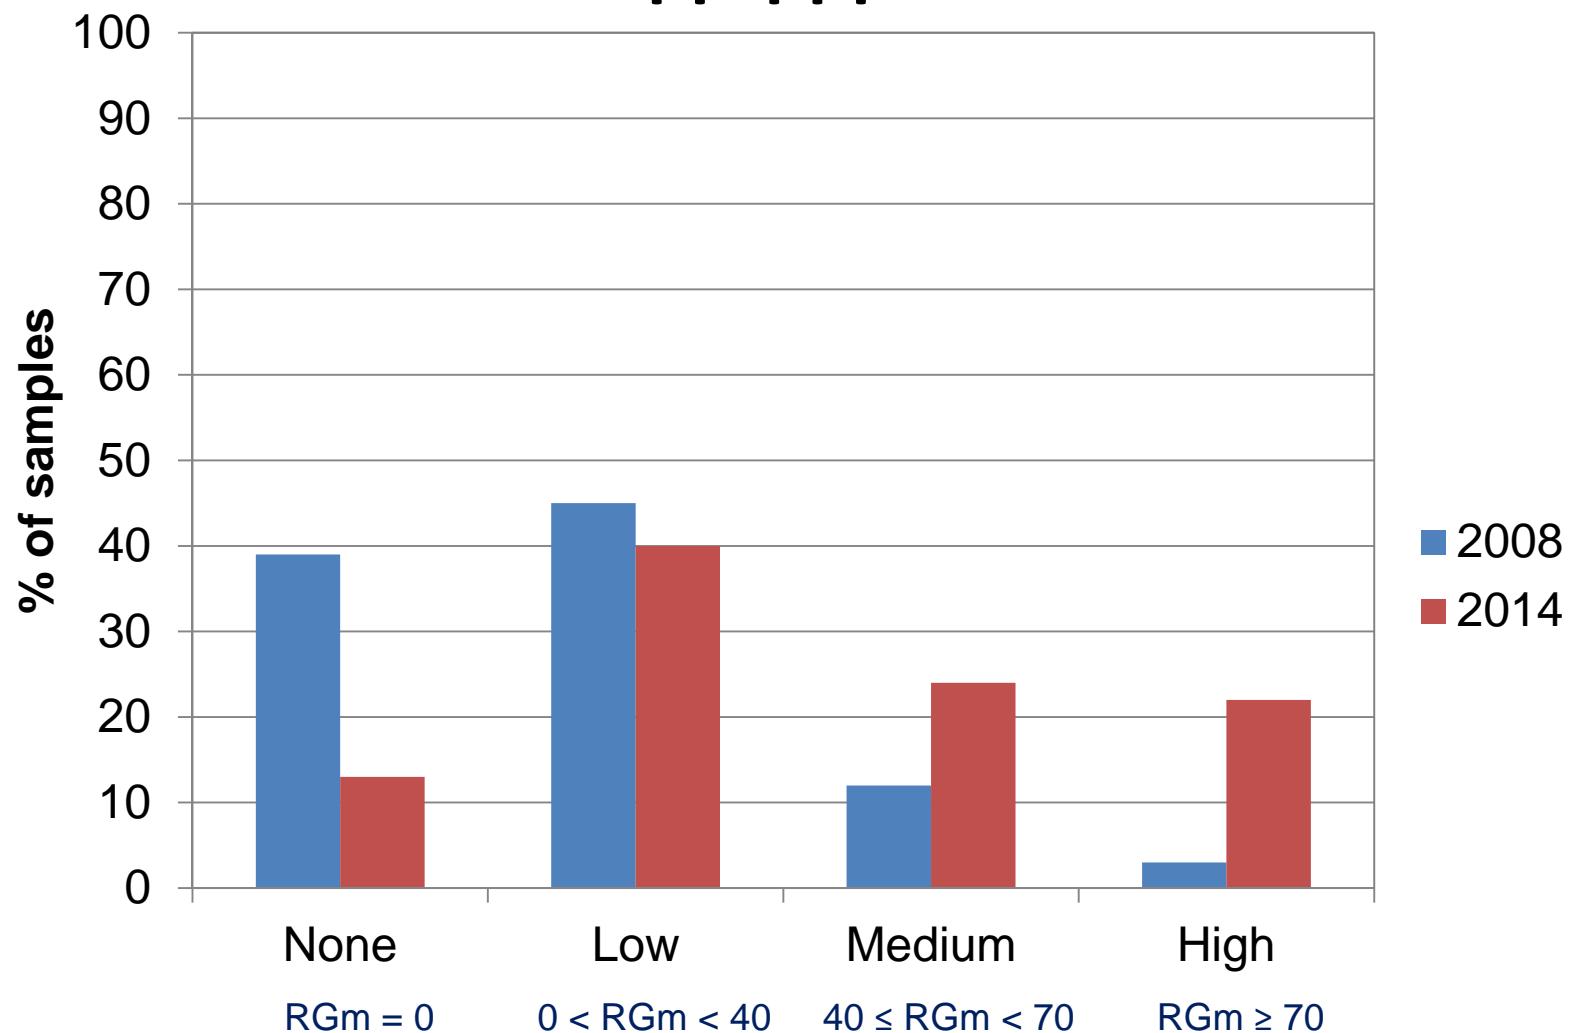

# dodine

- Elast FRAC GROUP U12

- Do not apply more than 6 applications per year.
- Rate: 48 fl.oz.
  - 25 fl. oz. common in tank mixes
- Best use: nut scab

Comments: Good sensitivity numbers;  
good mixing partner

# TPTH

**UGA**  
extension

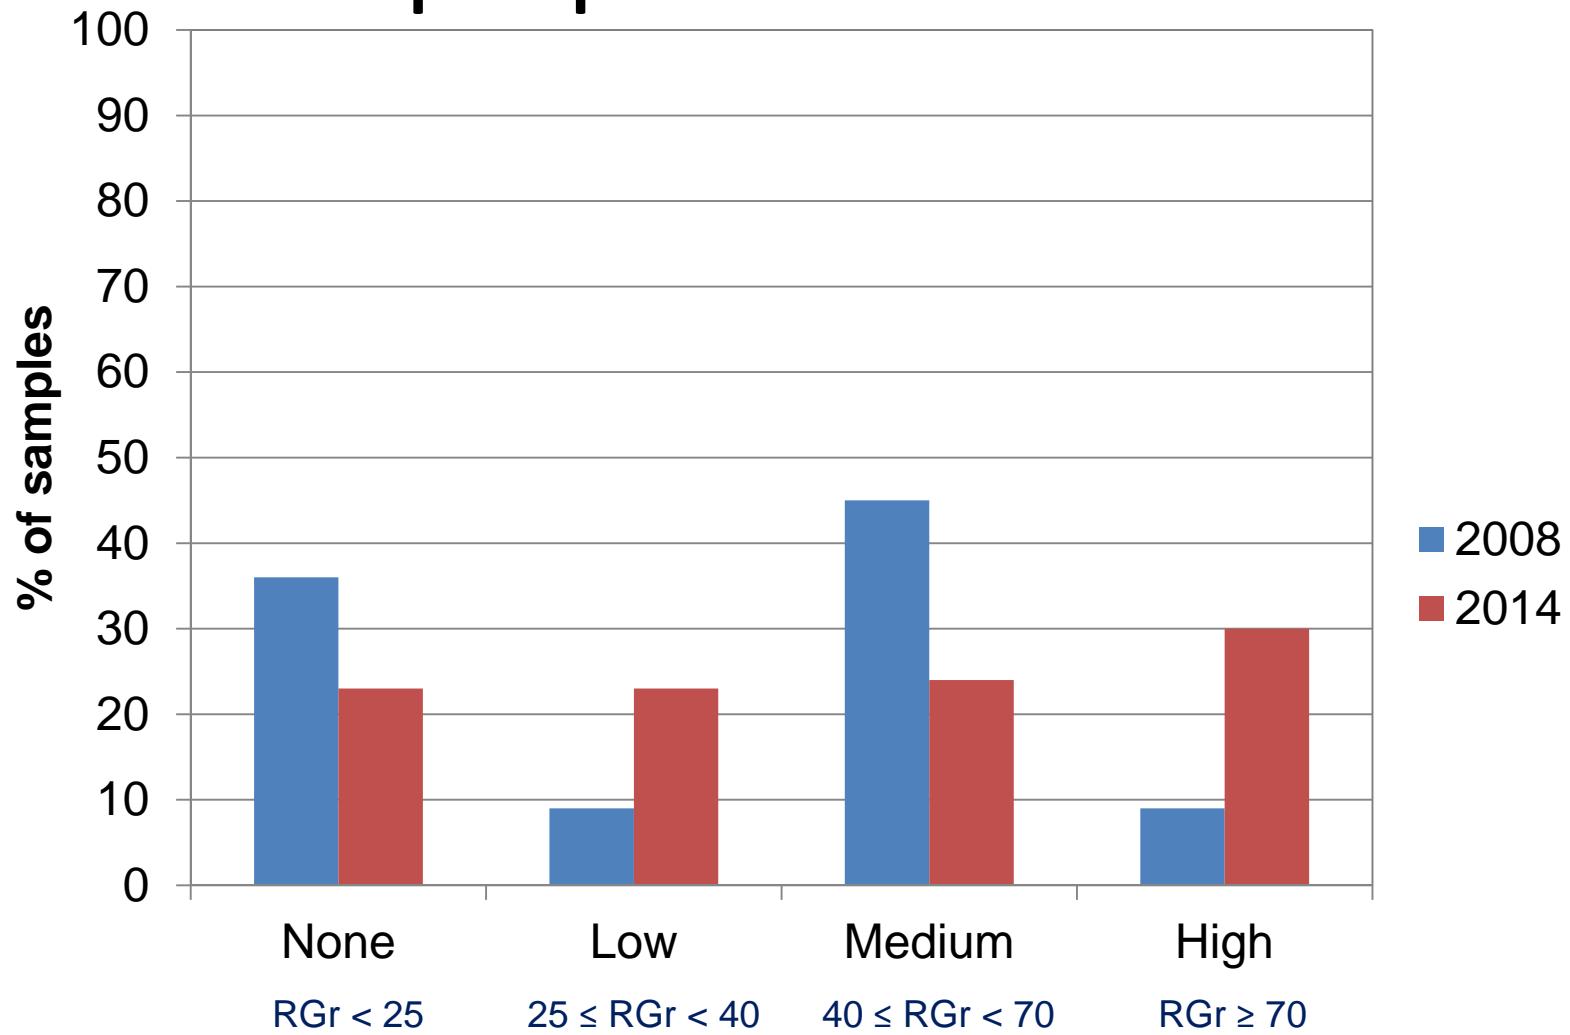

**Insensitivity class**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# TPTH

- Super Tin; Agri Tin                            FRAC GOUPE 30
- Do not exceed 45 oz. or 72 fl. oz. per year.
- Rates: 5.0 – 7.5 oz or 8 – 12 fl. oz.
- Best Use: nut scab
- Comments: If high insensitivity, limit number of applications and avoid reduced rates.

# propiconazole

**UGA**  
extension

Insensitivity class

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# propiconazole

Represents DMI class – FRAC GROUP 3

- propiconazole (Orbit, Propimax, Bumper, Quilt\*)
- fenbuconazole (Enable)
- tebuconazole (Folicur, Monsoon, Orius, Tebuazole, Toledo, Absolute\*...)
- metconazole (Quash)
- difenoconazole (Quadris Top\*) — No cross resistance?

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# Triazoles (DMIs or Group 3)

- Shifts in sensitivity dating back 20 years
- Rates: check label
- Do not follow full rate applications with reduced rates at later date.

# Triazoles (DMIs or Group 3)

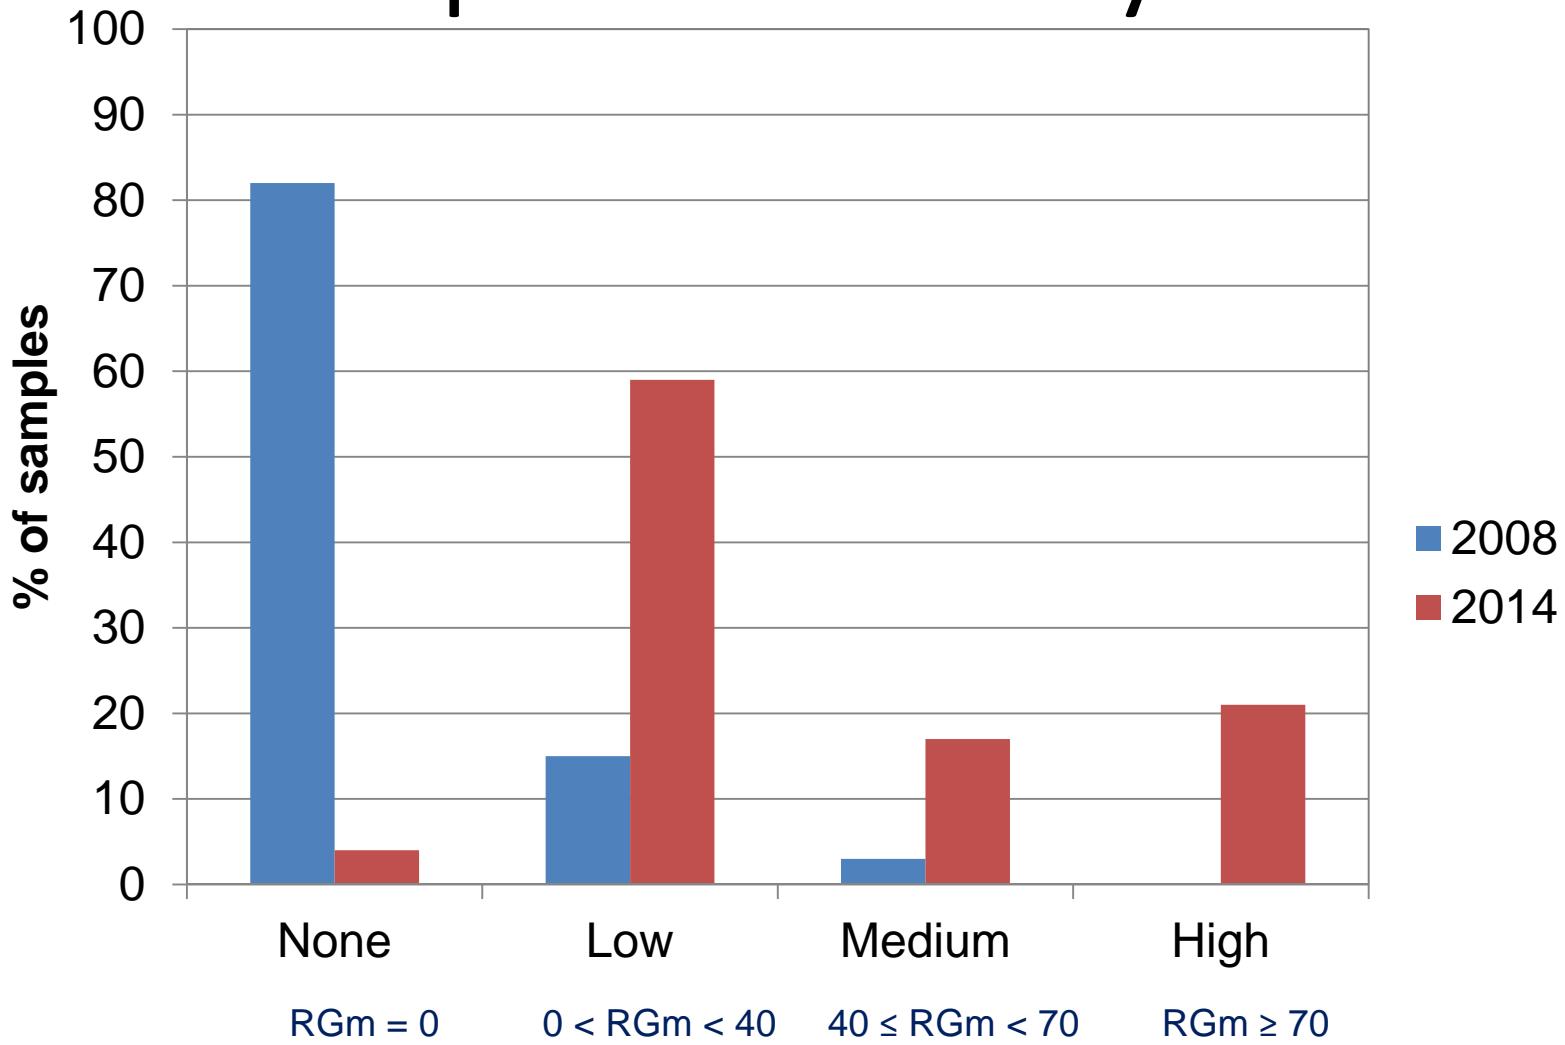

- Best use: leaf scab; powdery mildew; zonate leaf spot
- Comments: When medium-to-high insensitivity is known, avoid stand alone use, use full rates, and limit number of applications.

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

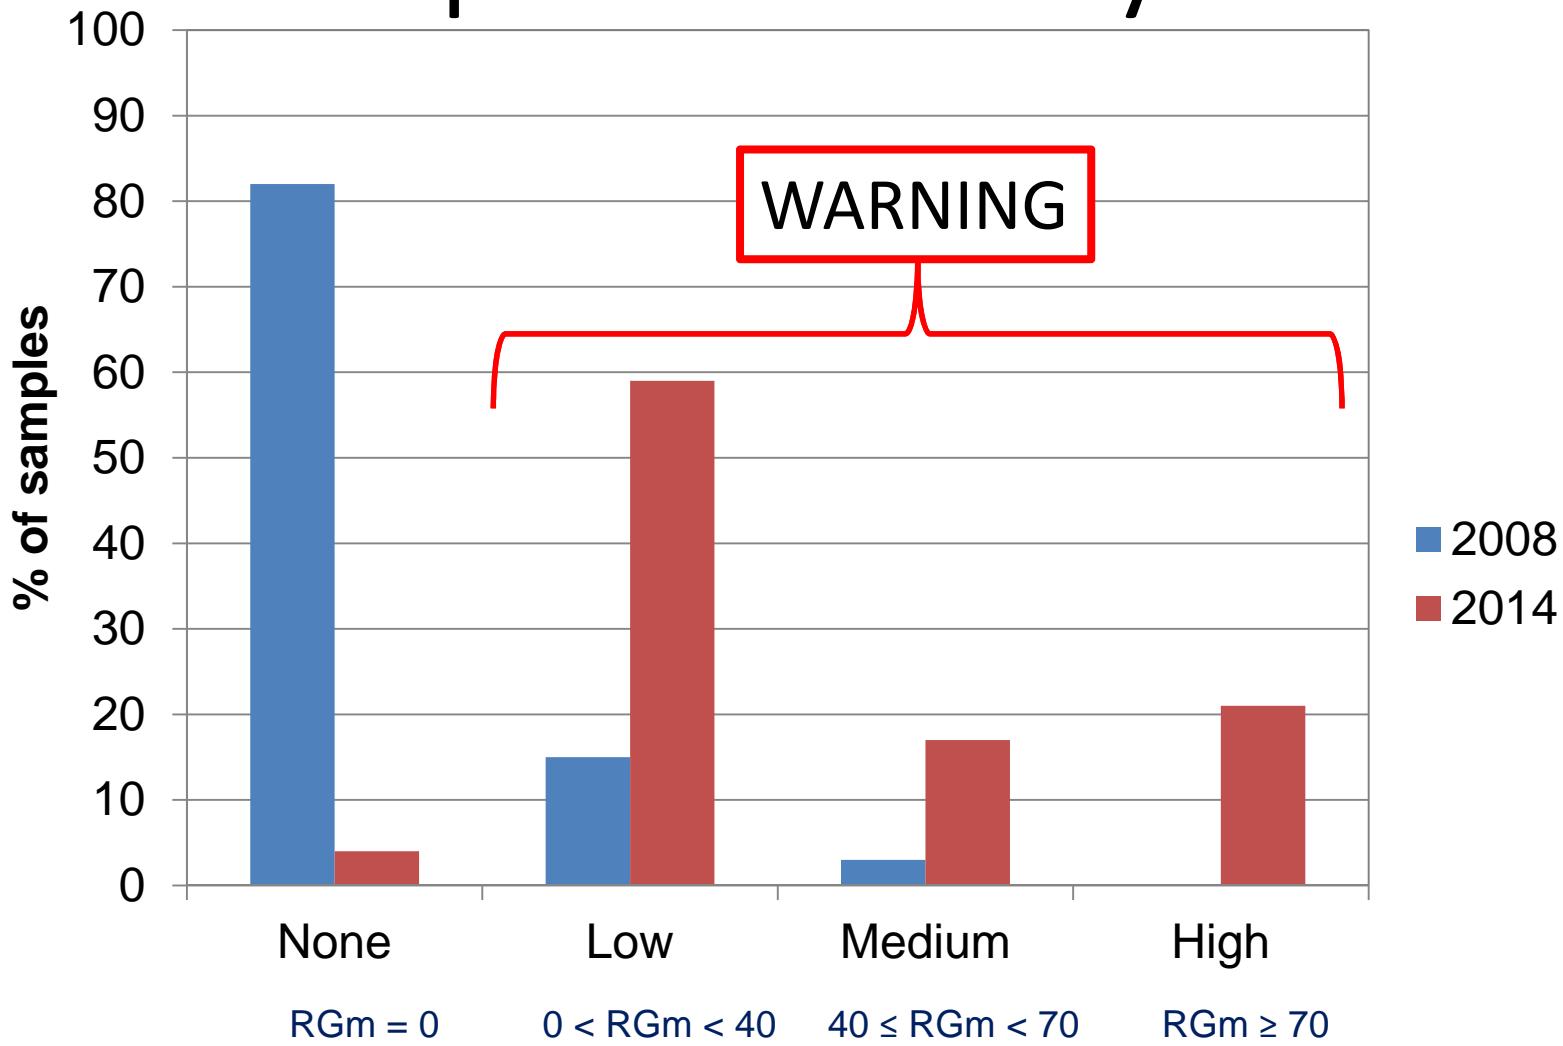

# thiophanate methyl

**UGA**  
extension

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# thiophanate methyl

**UGA**  
extension

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# thiophanate methyl

- Topsin M            FRAC GROUP 1
- Topsin 4.5FL, Topsin 70WP, Topsin WSB, Topsin XTR2
- Rate: 1 lb.; 20 fl.oz.
- Do not apply more than 3 lbs or 60 fl .oz. per year.  
**[no more than 1 to 2 applications recommended]**
- Always use in a tank mix.

**UGA**  
extension

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# thiophanate methyl

- Best Use:
  - Early season for leaf scab
  - May/Jun application for anthracnose and scab
  - Nut scab
- Comment: If high sensitivity, avoid use.

# azoxystrobin

Insensitivity Class	Samples	2014	%
		%	
High (RG≥70%)	51		36
Medium (40%≤RG<70%)	48		34
Low			

A PCR-based assay has been developed that is designed to detect the genetic mutation that confers resistance to Qols.

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# strobilurins

Represents strobilurins    FRAC GROUP 11

- azoxystrobin:       Abound, Quadris\*,  
                            Quadris Top\*, Quilt\*,  
                            Quilt Xcel\*, Custodia\*
- trifloxystrobin:     Absolute\*
- kresoxim-methyl:   Sovran
- pyraclostrobin:      Headline

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# strobilurins

- Rates: check labels
- Recommended limit of 3 applications per season.
- Do not make more than 2 sequential applications.

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# strobilurins

- Best Use:
  - Excellent on leaf scab; should be good for anthracnose
  - Premixes with DMIs are also excellent nut scab materials
- Comments: No confirmed resistance; avoid overuse.

# phosphites

## Labeled for scab

- Phostrol
- ProPhyt
- Viathon
- FungiPhite
- Reliant

## Labeled for Phytophthora

- Fosphite
- Fungi-Phite
- KPhite
- Phiticide
- Phostrol
- Rampart
- Topaz

*The rapid assay method has not been tested with the phosphite materials.*

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# phosphites

- For scab control, continue to compare well to our traditional fungicides in UGA research trials (Ponder Farm).
- Their strength is on leaf scab.
- Use full labeled rates for nut scab.
- Should be good selection for suppressing anthracnose.

**UGA**  
**extension**

[extension.uga.edu](http://extension.uga.edu) | 1-800-ASK-UGA1

# phosphites

- Use up to 5 applications, but not in consecutive applications
- With susceptible cultivars, mix with other class of fungicide.

# 2015 Fungicide Sensitivity Testing

- Will remain a “free” fungicide sensitivity testing service available to pecan growers in Georgia
  - Thanks to the Georgia Agricultural Commodity Commission for Pecans (Georgia Pecan Commission)

# 2015 Fungicide Sensitivity Testing

- Instructions for collecting and shipping samples, and sample information forms can be downloaded from the following websites:
